

PolyKing®

PURE POLYESTER UNDERFLOOR INSULATION

LOW COST HIGH PERFORMANCE.

PolyKing polyester underfloor insulation is specifically designed for the underfloor insulation of new and existing suspended floors. For new buildings, the insulation is installed after the flooring has been laid.

PolyKing is a highly durable, economical and effective option, designed and manufactured in New Zealand.

Made from 100% pure polyester fibre, free of toxins or added chemicals, gently melted to bond the fibres together for a dense, thermal barrier that will not slump or lose its effectiveness overtime.

PolyKing underfloor insulation has been carefully engineered to be the best performing, most cost-effective underfloor insulation choice, backed by a 50-year guarantee and BRANZ testing for your assurance of quality and performance.

Polyking is designed to be stapled between floor joists in old or new houses to meet the requirements of the New Zealand building code.

option underlying
a warmer home

THE UNDERFLOOR INSULATION THAT COMES OUT ON TOP

DURABLE

Polyester fibre is a stable and durable material that holds its shape over time, so importantly, your insulation will not slump and lose effectiveness. It's also highly resistant to moisture damage. We back all that with a 50 year guarantee.

EFFECTIVE

Our underfloor insulation has a high loft thermal barrier to ensure best possible heat retention. Pure Polyester fibres are gently melted to form a dense, durable underfloor to prevent sagging, backed by a 50-year performance guarantee.

Our underfloor insulation is BRANZ tested for its quality and performance.

HEALTHY

Because it is made from 100% pure polyester, gently melted to bond the fibres together, PolyKing® does not contain any toxic chemical binders such as phenolic resin (that contains formaldehyde) commonly used in other insulation products. Polyester, like your clothing, is nontoxic, nonirritating, non-allergenic and safe for anyone coming into contact with it. PolyKing® has no nasty chemicals added to worry about and no microscopic fibres to irritate or be inhaled.

ECO FRIENDLY

We use mostly recycled polyester fibre made from recycled PET bottles to make our insulation, so you're helping keep plastic out of the environment. PolyKing® is also 100% recyclable and it's made right here in New Zealand.

EASY

PolyKing® is easy to install, coming in small bales designed to fit through manholes and under floors with a range of widths to suit regular joist spacing's. It can be easily ripped to length or cut around irregularities.

SAVE WITH A SENSIBLE SOLUTION

Over 1 million homes in New Zealand have little or no underfloor insulation. Studies show this can have a marked effect on your health - not to mention your comfort!

Insulating under your home's floor can make a big difference to retaining the heat in your home, saving on your energy bills.

For surprisingly little, you can make your home warmer, drier and healthier by having effective under floor insulation installed. PolyKing® is your affordable, sensible solution for the underfloor performance you need. It's a small investment that pays big returns in savings and benefits all round.

PolyKing® is manufactured by trusted parent company Terra Lana Products, as an economical alternative to the Terra Lana wool insulation range.

Millions of tiny pure polyester fibres are bonded together to create a thick thermal barrier
